

**Preconceptional supplement without iodine. Contains 800 µg folic acid and selenium. Sustained vitamin C-release.**

## What is Fertilovit® F<sup>THY</sup>?

**Fertilovit® F<sup>THY</sup>** is a food for special medical purposes tailored to meet the needs of women with autoimmune thyroiditis who are planning for pregnancy. Its specific composition helps to prepare the female body for conception and early pregnancy, thus providing excellent conditions for the healthy development of the new baby.

- ✓ Without iodine
- ✓ Important antioxidants, partly with sustained release
- ✓ Folic acid
- ✓ Selenium
- ✓ B-vitamins
- ✓ Iron
- ✓ Magnesium
- ✓ Coenzyme Q10

## Autoimmune thyroiditis and the desire for children

Chronic autoimmune thyroiditis is an autoimmune disease of the thyroid gland. It can occur in various forms. In Hashimoto's thyroiditis, the commonest form, the patient's body produces auto-antibodies directed against healthy thyroid cells, destroying them. As a consequence of this, thyroid hormone production decreases substantially (thyroid hypofunction or hypothyroidism). The rarer Graves' disease, on the other hand, is associated with the production of antibodies directed against a signaling molecule on the thyroid cells' surface. This causes the thyroid cell to produce an excessive amount of thyroid hormones (thyroid hyperfunction or hyperthyroidism). In the long run, however, many patients experience thyroid hypofunction as well.

It is estimated that one in six women have a predisposition for autoimmune thyroiditis. However, it still is not clear which reasons and triggers are responsible for the onset of the disease. Scientific studies have found associations with a variety of factors, such as genetic factors, excess iodine exposure, changing levels of sexual hormones during pregnancy or menopause, smoking or radiation.

## Symptoms are diverse and vary individually.

Thyroid hyperfunction is associated with symptoms such as sleeplessness, nervousness, hot flashes, rapid heartbeat and hair loss. Thyroid hypofunction on the other hand results in weight gain, fatigue and generally diminished performance, sensitivity to cold, diminished ability to concentrate and even depressive disorder.

Women who wish to conceive suffer particularly from diminished sexual desire, impaired menstrual cycles, decreased fertility and increased risk of miscarriage. In these cases fertility treatment with thyroid hormones can help to achieve healthy pregnancy. The patient herself can support therapy as well by making healthy lifestyle choices and maintaining a healthy diet that takes into account some specifics of the disease.

## A diet low in iodine

According to scientific studies excessive iodine exposure worsens the progress of the disease. A diet low in iodine on the other hand has been reported to result in an improvement. Hence patients with autoimmune thyroiditis are recommended to abandon iodized table salt. Any dietary supplements should be free of iodine as well.

## Vitamins and minerals

The importance of a sufficient supply with certain vitamins and minerals has long been acknowledged. Every gynecologist recommends taking folic acid, particularly because of its protective role in the early embryo's neurological development. More and more it becomes evident that other vitamins and minerals, too, can have a major impact on fertility. Scientific studies have shown that iron as well as B-vitamins are important for healthy conception.

## Selenium

Soils in Europe are poor in selenium. Consequently plants grown in this soil and thus food produced there have a low selenium content. In addition to this autoimmune thyroiditis is associated with an increased selenium demand. Hence it can be difficult for patients to take up selenium in sufficient quantities.

## Oxidative stress

Even though, as mentioned above, the reasons for the onset of the disease are not quite understood, recent research has revealed oxidative stress to be an important contributing factor. The term oxidative stress refers to the impairment of body cells by reactive oxygen species (ROS). Oxidative stress increases the immunological turmoil in the thyroid gland and many experts claim it to be responsible for a substantial part of the symptoms. Oocytes on the other hand are particularly susceptible to attacks by reactive oxygen species, too.

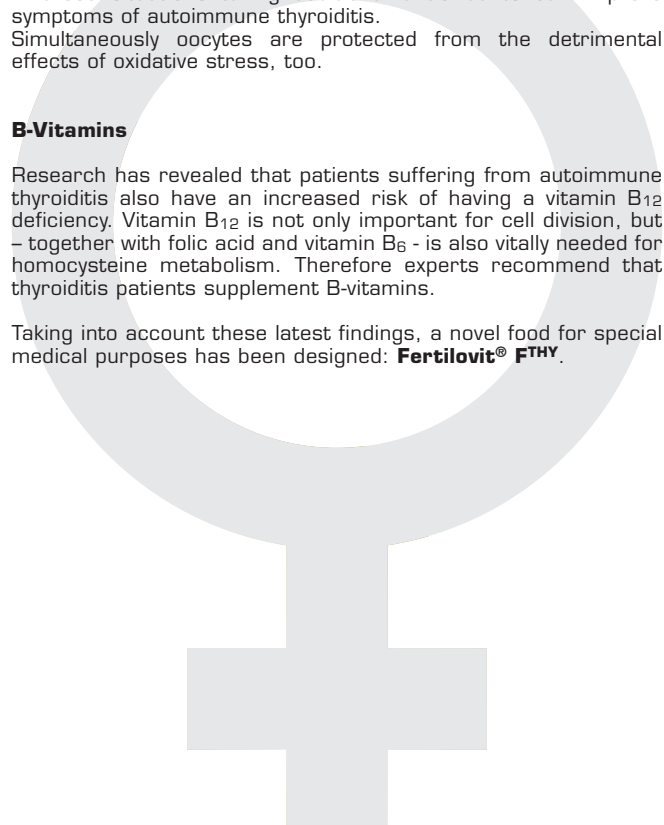

## Antioxidants

Normally the ROS produced in the body are defanged by the body's own protective antioxidant system. However, if there are too many ROS or too few antioxidants, this delicate balance can collapse and body cells are damaged. Stress, smoking and poor eating habits can weaken the body's own antioxidant system. In these situations taking additional antioxidants can improve symptoms of autoimmune thyroiditis. Simultaneously oocytes are protected from the detrimental effects of oxidative stress, too.

## B-Vitamins

Research has revealed that patients suffering from autoimmune thyroiditis also have an increased risk of having a vitamin B<sub>12</sub> deficiency. Vitamin B<sub>12</sub> is not only important for cell division, but – together with folic acid and vitamin B<sub>6</sub> – is also vitally needed for homocysteine metabolism. Therefore experts recommend that thyroiditis patients supplement B-vitamins.

Taking into account these latest findings, a novel food for special medical purposes has been designed: **Fertilovit® F<sup>THY</sup>**.

# Fertilovit® F<sup>THY</sup>

For the dietary management of  
women with thyroid autoimmunity

# Consumer Information

## Administration form:

Capsules

## Packaging size:

90 capsules, Three month pack

## Net quantity::

49,5 g

## Ingredients:

Magnesium oxide, L-ascorbic acid, glazing agent hydroxypropyl-methylcellulose (capsule), ferrous citrate, calcium-D-pantothenate, coenzyme Q10, nicotinamide, D-alpha-tocopheryl acetate, pyridoxine-HCl, thiamine-HCl, riboflavin, zinc oxide, pteroylmonoglutamic acid, biotin, sodium selenite, cholecalciferol, coloring agent titanium dioxide (capsule), cyanocobalamin.

## Supplement facts:

The composition of **Fertilovit® F<sup>THY</sup>** accounts for the special requirements of women with autoimmune thyroiditis planning for conception.

	daily dose (1 capsule)	%NRV*	per 100 g	%NRV*
<b>Energy</b>	3,89 kJ (0,94 kcal)	-	903 kJ (218 kcal)	-

\*) Nutrient reference values according to EU regulation

**Fertilovit® F<sup>THY</sup>** does not contain lactose, gelatine, and gluten.

## Application:

**Fertilovit® F<sup>THY</sup>** is a suitable food for special medical purposes for women with autoimmune thyroiditis who are planning for pregnancy.

## Please note:

**Fertilovit® F<sup>THY</sup>** is a nutritionally incomplete food for special medical purposes. Some of its ingredients exceed defined maximum quantities. The product must be used under medical supervision. Do not exceed the recommended dosage.

**Fertilovit® F<sup>THY</sup>** cannot and must not replace a healthy lifestyle and a wellbalanced diet. Please store out of reach of children.

## How to use Fertilovit® F<sup>THY</sup>:

For best results, experts recommend to start taking a supplement about three months prior to conception. However, taking **Fertilovit® F<sup>THY</sup>** can be started at any time.

Take one capsule **Fertilovit® F<sup>THY</sup>** daily. Swallow the capsules whole with plenty of water.

If you take thyroid hormones, do not take them at the same time as **Fertilovit® F<sup>THY</sup>**. The iron in **Fertilovit® F<sup>THY</sup>** may bind to the hormones, making them ineffective.

## Best-before:

The best-before date is printed on the packaging.

## Made in Germany
